# Content & Research Intern

**FYI | Mumbai | Full-time Internship**

## About FYI

FYI Group is a multidisciplinary strategy and creative company specialising in the built environment. With 15 years of industry experience, we work with leading brands across architecture, design, real estate, construction and infrastructure.

Our eight specialised practices, **Strategy, Experience, Studio, Design, Intelligence, Platforms, AI and Ventures**, bring together creative, strategic and technological expertise to build brands, experiences, digital solutions and industry-led initiatives.

## The Role

We are looking for a **Content & Research Intern with strong writing skills, intellectual curiosity and a genuine interest in architecture, design and the built environment.**

You will work closely with our strategy, research and content teams to develop research-led narratives, industry insights, editorial content and technical communications.

We value curious, proactive individuals who enjoy asking questions, exploring ideas and translating complex information into clear, thoughtful writing.

## What You'll Do

- Conduct primary and secondary research across architecture, design, construction, real estate and infrastructure.
- Research emerging industry trends, materials, technologies, design practices and developments in the built environment.
- Support the creation of technical content, industry analyses, presentations and thought leadership pieces.
- Collaborate with writers, strategists and designers to develop clear, accurate and engaging content.
- Organise research findings, maintain reference libraries and contribute to knowledge-building initiatives.
- Take ownership of assigned tasks and deliver accurate, well-researched work within deadlines.

## Who We're Looking For

- **Students or recent graduates in Architecture, Urban Design, Planning, Design Research, Architectural Journalism or related disciplines are preferred.**
- Strong writing and communication skills with an excellent command of English.
- An interest in academic research, technical writing, architectural documentation and editorial storytelling.
- Ability to research, analyse and synthesise information from multiple sources.

- Familiarity with architectural terminology, materials, construction processes or design methodologies is an advantage.
- Strong attention to detail, critical thinking and a willingness to learn.
- A proactive, resourceful attitude with the ability to work independently and take initiative.
- Good organisational skills and the discipline to meet deadlines.
- Curiosity about emerging technologies, sustainability, design innovation and the future of the built environment.

**We are looking for a curious mind with a researcher's instinct, a writer's clarity and the ambition to contribute to meaningful conversations about the built environment.**
